PCE Regulatory Compliance Service

We offer our clients a range of services for an integrated strategy for chemical substances used in plastics converting, compounding / masterbatching and recycling in order to support them through the REACH process:

— **Regulatory News on REACH & CLP**

Get the latest news on REACH & CLP!

— **Consortium Management**

Your support for scientific and advocacy activities!

— **Plastics Exposure Scenario Tool**

Perform a Chemical Safety Assessment with PESTOOL!

— **SDS-R Tool for Recyclers**

Get access to generic and tailor-made SDSs!

PCE Your Network, Your Solution, Your Advisor

Regulatory News on REACH & CLP

- Do you want to receive first-hand information on REACH & CLP?
 - Do you want to be up-to-date regarding the complete REACH & CLP legislation?
 - Are you struggling to trawl through all regulatory dossiers to find the important information?

Then register to our Regulatory News Service!

Our regulatory experts have the knowledge and know-how to filter the colossal amount of information in order to provide you with the latest important information on REACH & CLP.

Consortium Management

- Is a substance that you use currently discussed at authority level?
 - Are you worried that the outcome might have an impact on your business?

Our experts can support you in your advocacy activities and lead you through the complete advocacy process:

- Bringing together companies facing the same problem.
- Collecting all necessary scientific information.
- Developing the necessary dossiers regarding your substance (including socio-economic assessment, exposure assessment and design of tests programmes & risk assessment).
- Submitting the dossiers to the European Chemicals Agency.

What we have already done:

- Successful submission of one of the first REACH applications for an authorisation dossier (soft PVC recyclate containing DEHP).
- Set-up of ADCA Plastics Users Consortium in order to assess exposure and recommend safe use guidance as an alternative to authorisation.

Plastics Exposure Scenario Tool

- Facing difficulties in providing your customers with exposure scenarios?
 - Do you believe the exposure scenarios you receive to be overly stringent?

Perform a Chemical Safety Assessment with PESTOOL!

The Plastics Exposure Scenario Tool (PESTOOL) is a Chemical Safety Assessment (CSA) specifically developed by the plastics industry for the plastics industry. The tool provides a solution to the obligations laid out in article 31.7 of REACH:

- **For plastic additive suppliers**, PESTOOL provides plastic specific exposure scenarios for hazardous additives.
- **For masterbatchers and compounders**, PESTOOL is able to perform a CSA on their mixture resulting in a Safe Use Information annex that can be appended to the SDS. This fulfills the REACH obligation to provide Safe Use information to customers.
- **For converters**, PESTOOL provides the opportunity to perform a CSA to optimize the risk management measures on the factory floor.

Plastics Exposure Scenario Tool

Your key features

- Ease of Use: As a user you only have to select your substances and specify their concentration.
- Implements the latest CLP based Lead Component Identification Methodology.
- Employs a tier 2 matrix effect model for worker exposure reducing the exposure estimates and required risk management measures.
- Uses tier 2 environmental emission scenarios developed by the OECD.
- Generates plastics specific Exposure Scenarios/Safe Use Information.
- Provides options to optimise risk management measures on the factory floor by performing a Chemical Safety Assessment.

SDS-R Tool for Recyclers

- Are you a recycler?
 - Do you lack information from your waste stream?
 - Would you like to provide structured safe use information to your customer?

REACH regulation specifies that you have to provide appropriate information on safe use to your customer. Our **Safety Data Sheets Service for Plastics Recycling (SDS-R)** provides you with the right support. It gives recyclers access to generic and tailor-made SDSs when they enter information about their company and the type of waste they recycle:

- Creating a **generic SDS** based on industry knowledge.
- **Specific Tailor-Made SDSs** can be requested for atypical situations and created based on information submitted (e.g. test results).

SDS-R Tool for Recyclers

Your key features

- Ease of use is guaranteed as the only input required is the previous application of your waste input.
- Internationalisation streamlined by the availability of your SDS in 14 languages.
- Online availability.
- Data always up to date due to continuous updating by PCE.

Safe

Who we are

Polymer Comply Europe is a service provider for the plastics industry specialised in EU legislation.

Since 1989, within the group of the European Plastics Converters association (EuPC), we have been closely working with the industry developing an in-depth knowledge and wide experience in EU Regulatory Compliance, Association Management and Projects & Studies.

Due to increasing complexity of EU legislation, companies need more legal and technical advice. Companies involved in the plastics industry need support on how to cope with this burden and our team can provide you with the best expertise and knowledge.

You need proper advice from the best EU advisors. For this we decided to develop a pool of EU plastics experts under our service company Polymer Comply Europe, based in Brussels.

Polymer Comply Europe helps you with its extensive European network in order to bring the right solutions to your business.
